Test Web Application

1. Create a relational database to hold the following in MSSQL:
    Blog (Id, Title, Body, Alias, StartDate)
    Author (Id, Title, FirstName, LastName)
    * A blog needs to be able to be connected to one or more authors.
    * You should be able to create the database in the app_data folder of the web project below.

2. Create a ASP.NET MVC C# web application that completes the following requirements.
    - Uses Entity Framework to map to the database created in step 1.
    - Basic form to add/edit a blog post. ** Forms should use bootstrap CSS and optionally Vue.js.

3. Use GitHub for version control and make available on a public repo.
